

### Availability of RH products (%) in March 2011 and January 2013.

### Availability of FP products (%) in March 2011 and January 2013.

### Availability of CS products (%) in March 2011 and January 2013.

86 Village Health Team (VHT) members were identified and trained across the seven districts to sensitize the community on availability and use of the selected health products.

## Other Findings

- **Exposure to A2L activities:**
  - 64.3% of providers trained in record keeping and basic medical dispensing procedures are outlet owners and are always at the outlet.
  - Only 19.4% reported ever received the 'win big promotion' voucher in three months preceding the audit. The voucher is part of the activities aimed at encouraging stocking a wider range of products
- **Registration status:** Registration of medical outlets improved over the two years from 31.8% in March, 2011 to 65.9% in early 2013.
- **Reporting to districts:** On average, nearly 50% of the outlets in all districts submit completed HMIS reports to the district.

## Lessons

- Public-Private partnerships between PACE, private medical outlets and districts (MOH) improves availability, uptake and monitoring of essential health products.
